

Lead SaaS Agent — Netlify Notes

Project: Lead SaaS Agent

Status: Static Netlify-ready upload folder created.

Files included:

- netlify-static/index.html
- netlify-static/billing.html
- netlify-static/README.txt
- .github/workflows/netlify.yml
- .vscode/extensions.json

Important note:

The static upload version works immediately for manual deployment.

The GitHub Actions Netlify deploy needs NETLIFY_AUTH_TOKEN and NETLIFY_SITE_ID secrets.

Crypto payment behavior:

In the current project, BTC/ETH payment does not auto-activate access.

The code records the payment as pending_review and requires admin approval before subscription access is enabled.

Reference:

server.js confirms this in the crypto confirm and admin review routes.
